

DarshanEase – Smart Temple Darshan Ticket Booking System

Overview — DarshanEase is a web-based application designed to simplify and modernize temple darshan ticket booking through a centralized, user-friendly online system.

DarshanEase enables devotees to book darshan slots online instead of standing in long queues or relying on offline, manual processes. By providing real-time slot visibility and digital ticketing, the platform improves convenience for devotees while helping temples manage crowd flow more effectively.

Problem Identification

Current darshan booking processes in many temples create avoidable inconvenience for devotees and significant operational burden for temple management.

- **Long waiting queues** — devotees spend hours in line, often with uncertainty about entry time.
- **Overcrowding during festivals** — peak days lead to safety concerns and unmanaged crowd surges.
- **Manual record maintenance** — paper-based tracking increases errors and slows reconciliation.
- **Lack of online booking facilities** — devotees must visit on-site counters or depend on intermediaries.
- **No centralized booking system** — bookings are fragmented across counters/temples with no unified view.
- **Poor user experience** — unclear instructions, limited support, and inconsistent processes reduce trust.
- **Difficulty managing crowd flow** — absence of timed, capacity-controlled slots leads to congestion.
- **Limited transparency in slot availability** — devotees cannot reliably know which slots are open before arriving.

These issues collectively reduce devotee satisfaction, increase administrative workload, and make it difficult for temples to plan resources and maintain orderly darshan operations.

Proposed Solution

DarshanEase will be a centralized online platform serving both devotees and temple administrators. Devotees interact through a simple booking experience, while administrators use dedicated dashboards to configure temples, manage capacity, and monitor operations in real time.

Devotee capabilities

- Register and log in securely
- Browse available temples
- Check darshan slot availability
- Book darshan tickets online
- Receive digital confirmations
- Download QR code tickets
- Manage booking history
- Make online donations

Administrator capabilities

- Manage temples
 - Manage slots
 - Manage bookings
 - Manage donations
 - Manage users
 - Monitor availability and generate reports through dedicated dashboards
-

Benefits

For Devotees

- Online booking from anywhere
- Reduced waiting time
- Transparent slot availability
- Secure authentication
- Digital ticket generation
- Easy cancellation and booking management

For Temple Administration

- Automated booking management
 - Better crowd control
 - Efficient slot allocation
 - Centralized database
 - Real-time booking updates
 - Analytics and reporting
-

Idea Prioritization Matrix

Project Idea	Innovation	Feasibility	Impact	Priority
Online Temple Darshan Booking	High	High	High	★★★★★
Online Donation Management	High	High	Medium	★★★★
QR Code Ticket Verification	High	Medium	High	★★★★★
AI Temple Recommendation	Medium	Medium	Medium	★★★
Live Crowd Monitoring	High	Low	High	★★★

Why DarshanEase?

Many temples still rely on traditional, counter-based booking methods and manual coordination to manage darshan entry. These methods do not scale well during peak seasons and provide limited transparency to devotees.

DarshanEase provides an efficient, secure, and scalable digital solution that streamlines booking and improves the overall darshan experience. With centralized slot management, real-time updates, and digital ticket verification, the platform benefits devotees through convenience and clarity while enabling temple management to operate with better control and measurable insights.

Innovation Highlights

- MERN Stack Application
- JWT Authentication
- Role-Based Access Control
- QR Code Ticket Generation
- PDF Ticket Download
- Online Donation Module
- Admin Dashboard
- Organizer Dashboard
- Responsive User Interface
- Secure Booking Management

Expected Outcome

- ☐ Reduce booking time significantly
- ☐ Improve user convenience

- ☐ Minimize overcrowding
- ☐ Enhance administrative efficiency
- ☐ Digitize temple booking operations
- ☐ Provide a secure and scalable platform for temple management
