

Stakeholders for a Temple Booking System

This document outlines the key stakeholders involved in a temple booking system, including their interests, needs, and influence on the overall experience. It also provides practical artifacts (personas and an empathy map) to guide product decisions and identify improvement opportunities.

Primary Stakeholders

Primary stakeholders directly use, operate, or depend on the temple booking system for daily outcomes.

Stakeholder	Primary goals	Key needs from the system
Devotees / Visitors (end users)	Book darshan, sevas, and special event slots with confidence; reduce waiting and uncertainty.	Fast search and slot discovery; clear pricing and rules; reliable confirmations; easy rescheduling/cancellation (where permitted).
Temple Administration (operations & management)	Maintain orderly crowd flow; ensure fair access; improve service quality; reduce manual workload.	Capacity and schedule control; dashboards and reporting; configurable rules; incident handling; operational visibility.
Priests / Service Teams	Deliver sevas on time; minimize confusion and last-minute changes; maintain ritual accuracy.	Clear daily schedules; attendee lists; change notifications; simple check-in/verification.
Counter Staff / On-site Support	Help devotees complete bookings; resolve issues quickly; reduce queues at the temple.	Assisted booking tools; identity/booking lookup; fast edits within policy; printable/scan-ready confirmations.
System Owner / Product Team	Deliver a usable, secure, and reliable system; meet compliance and service commitments.	Analytics; feedback loops; experimentation support; auditability; scalable architecture.

Secondary Stakeholders

Secondary stakeholders influence or support the system, but are not the core day-to-day users of booking flows.

Stakeholder	How they're involved	What they care about
Payment Provider / Bank	Processes payments, refunds, and chargebacks.	Secure transactions; low failure rates; clear reconciliation; compliant refund handling.
IT / Security / Compliance	Ensures system stability, data protection, and governance.	Access controls; audit logs; incident response; privacy and data retention policies.
Customer Support (remote)	Handles user queries via phone, chat, or email.	Fast issue resolution; clear policies; visibility into booking and payment status.
Temple Trust / Board / Sponsors	Oversees funding, policy, and long-term planning.	Transparency; reporting; equitable access; reputation and community trust.
Local Authorities (as applicable)	Supports crowd, safety, and traffic management during peaks.	Predictable attendance; risk mitigation; adherence to local rules.

User Personas

The following persona templates are designed to present user-provided details (names, roles, goals, pain points, statements) exactly as received. If specific details are not provided, the fields remain intentionally blank to avoid assumptions.

Persona 1 — Name	Age
Ravi Kuamr	35
Goal	
Book darshan tickets online without waiting in long queues.	
Pain points	
• Long waiting time • Uncertain slot availability • Manual booking process • Crowded temples during festivals	
Role	
Devotee	

Persona 2 — Name	Age
Suresh Sharma	45
Goal	
Manage bookings efficiently and monitor daily visitors.	
Pain points	
• Manual record maintenance • Difficult crowd management • High administrative workload	
Role	
Temple Administrator	

Empathy Map

Use this empathy map to capture user-provided details (actions, feelings, needs) exactly as received and keep teams aligned on real experience drivers.

Says	Thinks
• "I don't want to stand in long queues." • "I need a simple booking process." • "I want to know available slots before travelling." • "I prefer online payments."	• Will my booking be confirmed? • Is the website secure? • Can I cancel my booking if needed? • Will I receive a digital ticket?
Does (actions)	Feels
• Searches for temple information • Compares available slots • Books tickets online • Downloads ticket • Visits temple	• Frustrated by long queues • Excited after successful booking • Happy with digital confirmation • Confident using secure payment methods
Needs	
• Simple registration • Easy login • Fast booking • Real-time slot availability • Secure authentication • Downloadable tickets • Booking history • Mobile-friendly interface	

Note — When user-provided statements, actions, feelings, and needs are available, place them into the corresponding fields without editing wording to preserve fidelity.

Opportunities

These opportunities target common friction points in temple booking journeys. If user-provided opportunities exist, include them verbatim alongside (or in place of) the list below.

Opportunity area	What to improve	Expected value
Slot discovery & clarity	Show availability by date/time clearly; explain eligibility, duration, and preparation requirements.	Fewer booking errors; reduced support load; higher confidence.
Pricing, donations & fees transparency	Break down costs, donation options, and policies before payment.	Fewer drop-offs; improved trust and compliance.
Reliable confirmations	Instant confirmation with reference number; SMS/email/WhatsApp notifications; offline-accessible receipt.	Reduced anxiety; faster entry and verification.
Reschedule/cancel flows (policy-driven)	Provide clear rules and self-serve options where allowed; show refund status and timelines.	Lower support dependency; better user satisfaction.
On-site check-in	QR-based verification; dedicated assisted lanes; real-time slot validation.	Shorter queues; smoother crowd management.
Accessibility & language support	Multilingual UI; large-text mode; clear error messages; low-bandwidth support.	Inclusive experience; fewer failed attempts.

Implementation checklist

- ☐ Define booking policies (capacity, eligibility, cutoff times, refund rules) with temple administration
- ☐ Map the end-to-end journey: discover → book → pay → confirm → check-in → support
- ☐ Instrument analytics for drop-offs, payment failures, and support contacts
- ☐ Create operational dashboards for daily seva schedules and capacity utilization

Conclusion

Improving the temple booking experience creates measurable value for devotees and temple operations alike: clearer information reduces confusion, reliable confirmations build trust, and smoother check-in helps manage crowds respectfully and safely. By aligning stakeholder needs and capturing real user signals through personas and empathy mapping, the booking system can deliver a more predictable, accessible, and dignified experience for everyone involved.
